

AI & Automation Developer Hiring

Welcome,

Thank you for your interest in career opportunities at Relu Consultancy. This hackathon is designed to test your ability to build real-world AI + automation systems, combining scraping, reasoning, and deployment.

We fully support Live Coding with Brain: Use AI as your co-pilot, but your logic, architecture, and critical thinking must lead the way. Go ahead and show us what you can build!

- Duration: 6 Hours
- Format: Individual

Overview:

Build an AI-powered Company Research Assistant that enables users to research any company by providing either the company name or its website URL.

The application should automatically gather information from the company's website and other publicly available online sources, analyze the collected information using AI, identify potential competitors, and generate a professional downloadable PDF report.

The primary objective of this assignment is to evaluate your ability to design and build AI-powered applications that combine website crawling, AI reasoning, external APIs, and a modern user experience.

Objective:

Develop an AI application capable of:

- Researching companies
- Crawling websites
- Collecting public information
- Generating AI-powered insights
- Identifying competitors
- Producing downloadable PDF reports
- Providing an interactive ChatGPT-style interface

manishgiri8101@gmail.com [Switch accounts](#)

The name, email address and photo associated with your Google Account will be recorded when you upload files and submit this form

* Indicates required question

Email *

☐

Record manishgiri8101@gmail.com as the email to be included with my response

User Input:

The application must support both input methods.

Option 1: Company Name

Examples:

- Microsoft
- Tesla
- Stripe

Option 2: Website URL

Examples:

- <https://stripe.com>
- <https://tesla.com>

If a company name is provided, the application should first determine the company's official website before beginning the research process.

Functional Requirements:

1. Company Research

Collect and display the following information whenever available:

- Company Name
- Website
- Phone Number
- Address
- Products / Services
- AI-generated Pain Points

Information may be collected from:

- Company Website
 - Search Engines
 - Public Sources
 - Other Relevant Websites
-

2. Website Crawling

Implement a website crawler.

The crawler should automatically discover and analyze important pages such as:

- Home
- About
- Products
- Services
- Solutions
- Contact
- Pricing (if available)

The crawler should:

- Ignore duplicate pages
 - Ignore login pages
 - Ignore irrelevant pages
 - Extract meaningful content for AI analysis
-

3. Search Integration

Use Serper.dev for searching and research.

Possible use cases include:

- Finding the official company website

- Collecting company information
 - Finding contact details
 - Identifying competitors
 - Gathering supporting information from public websites
-

4. AI Integration

Use OpenRouter for AI processing.

The application should allow users to choose any AI model supported by OpenRouter.

The AI should generate:

- Company Summary
 - Products / Services
 - AI-generated Pain Points
 - Competitor Suggestions
-

5. Competitor Analysis

Identify companies operating in:

- The same country
- The same industry
- Similar products or services

For each competitor display:

- Company Name
 - Website
-

6. Interactive Chat Interface

The application should provide a ChatGPT-style interface.

Users should be able to:

- Submit a company name
- Submit a website URL
- View research results

A Retrieval-Augmented Generation (RAG) implementation is not required.

7. PDF Generation

Generate a professional PDF report.

The PDF should include:

- Company Information
- Company Name
- Website
- Phone Number
- Address
- Products / Services
- AI-generated Pain Points

Competitor Information

- Competitor Name
- Competitor Website

The report should be downloadable with a single click.

User Interface Requirements

Design a modern ChatGPT-style interface.

Suggested layout:

- Input field
- Chat conversation
- AI responses
- Progress indicators
- Download PDF button

The UI should be:

- Clean
- Responsive
- Mobile Friendly
- Desktop Friendly

A polished UI will receive bonus points.

Suggested Workflow

1. User enters a company name or website URL.
2. Search using Serper.dev.
3. Identify the official website (if necessary).
4. Crawl the website.
5. Extract useful information.
6. Collect additional information from public sources.
7. Send the collected data to OpenRouter.
8. Generate the AI report.
9. Identify competitors.
10. Display the report.
11. Generate a downloadable PDF.

Technology Requirements

AI

- OpenRouter

Search

- Serper.dev

Website Crawling

- The developer may use any suitable crawling framework or library.

Deployment

- Deploy the application as a single unified project on any platform of your choice.
- Netlify
- Vercel
- Cloudflare
- Any equivalent deployment platform

Data Storage

- No authentication required.
- No user accounts required.
- No report history required.
- No permanent database required.

Bonus Features

1. Modern Responsive UI

- ChatGPT-style interface
 - Responsive design
 - Loading indicators
 - Smooth user experience
-

2. Advanced Website Crawling

- Intelligent page discovery
 - Duplicate detection
 - Efficient content extraction
 - Optimized crawling
-

3. Enhanced Research

- Use Serper.dev together with website crawling to improve research quality.
-

4. AI Model Selection

- Allow users to choose any OpenRouter-supported AI model.
-

5. Discord Integration

Create a dedicated Discord Integration settings page or section containing:

- Discord Bot Token
- Discord Channel ID
- Save Configuration button

The evaluator will provide the Discord Bot Token and Discord Channel ID.

The application should also provide input fields for:

- Applicant Name
- Applicant Email Address

After a company report has been successfully generated, the application should automatically send the following information to the configured Discord channel.

Applicant Details

- Applicant Name
- Applicant Email Address

Research Details

- Company Name
- Company Website

Attachment

- Generated PDF Report

This feature demonstrates:

- Discord Bot API integration
 - File upload functionality
 - API authentication
 - Workflow automation
 - Third-party service integration
-

6. Public Deployment

Deploy the completed application and provide a publicly accessible URL.

Sample Site: NOTE it doesn't work only for Ui/UX idea

<https://relu-ai-dev-hiring.vercel.app/>

Below Images attached how they should look, in this one it will not generate anything

Deliverables

The submission should include:

- Source Code
- Deployment URL
- README.md
- Setup Instructions
- Environment Variable Documentation
- Website Crawling Implementation
- AI Company Research
- Competitor Analysis
- PDF Generation
- Discord Integration (Bonus)

AI-GENERATED PAIN POINTS

Managing enterprise adoption at scale while maintaining the collaborative simplicity that made them successful with individual teams

Competing with Adobe's established creative suite ecosystem after the failed acquisition, requiring aggressive feature parity in prototyping and developer handoff

Retaining top design talent and preventing brain drain as Adobe and other tech giants poach employees with competing offers

Balancing performance and feature richness as files grow increasingly complex with components, variables, and plugins in large organization workflows

Evaluation Criteria

Candidates will be evaluated on:

- AI Integration
- Website Crawling
- Search Integration
- Code Quality
- Project Structure
- UI / UX
- PDF Generation
- Competitor Analysis
- Deployment
- Overall Project Quality
- Bonus Features

Scoring Criteria

- Core Requirements: 80 Points
- Bonus Features: 20 Points
- Partial points may be awarded.
- Creativity, engineering quality, maintainability, and user experience will positively influence the final evaluation.

Additional Enhancements (Bonus – 10 Points)

Examples: Outstanding UI, responsive design, animations, intelligent crawling, performance optimizations, better prompts, better error handling, progress tracking, source references, additional insights, or other thoughtful improvements.

Maximum Score: 10 Bonus Points.

Discord Integration (Bonus – 10 Points)

Provide a Discord settings section with Bot Token and Channel ID. After report generation automatically send Applicant Name, Applicant Email Address, Company Name, Company Website and the generated PDF Report to the configured Discord channel.

Maximum Score: 10 Bonus Points.

Deployment & Documentation (5 Points)

Public deployment URL, README, setup instructions and environment variable documentation.

Maximum Score: 5 Points.

PDF Report Generation (10 Points)

Professional PDF containing all required company and competitor information.

Maximum Score: 10 Points.

Competitor Analysis (10 Points)

Identify relevant competitors and display competitor names and websites.

Maximum Score: 10 Points.

Serper.dev Integration (10 Points)

Use Serper.dev effectively to enrich company research.

Maximum Score: 10 Points.

OpenRouter AI Integration (15 Points)

Support model selection and generate high-quality AI insights.

Maximum Score: 15 Points.

Website Crawling & Data Extraction (15 Points)

Crawl important pages, extract meaningful content, avoid duplicates.

Maximum Score: 15 Points.

Company Research (15 Points)

Support company name and website URL, identify official website, retrieve company

information, products/services and AI-generated pain points.

Maximum Score: 15 Points.

Category | Points

Company Research – 15

Website Crawling & Data Extraction – 15

OpenRouter AI Integration – 15

Serper.dev Integration – 10

Competitor Analysis – 10

PDF Report Generation – 10

Deployment & Documentation – 5

Discord Integration (Bonus) – 10

Additional Enhancements (Bonus) – 10

Total – 100

Acceptance Criteria

The assignment will be considered complete if it:

- Supports both company names and website URLs.
- Uses Serper.dev for search and research.
- Crawls company websites.
- Uses OpenRouter for AI analysis.
- Generates company summaries and AI-generated pain points.
- Identifies competitors and displays their names and websites.
- Provides a modern ChatGPT-style interface.
- Generates a downloadable PDF report.
- Is publicly deployed.
- Includes clear setup documentation.

Candidates are encouraged to improve the application beyond the minimum requirements by adding thoughtful enhancements, better UI/UX, improved crawling strategies, caching, performance optimizations, or other features that demonstrate engineering ability.

Frequently Asked Questions (FAQs)

1. Which AI model should I use?

You may use any AI model available through OpenRouter. The choice of model is entirely up to you.

2. Can I use any programming language or framework?

Yes. You may use any programming language, framework, or technology stack that best fits the requirements.

3. Is a database required?

No. A database is not required for this assignment. You may use temporary storage if needed during processing.

4. Is authentication required?

No. User authentication and account management are not required.

5. Can I use third-party libraries for website crawling?

Yes. You may use any suitable crawling library or framework.

6. Can I use additional APIs besides Serper.dev and OpenRouter?

Yes. Additional APIs may be used if they enhance the application. However, Serper.dev must be used for search and research, and OpenRouter must be used for AI processing.

7. Do I need to deploy the application?

Yes. Please deploy the completed application and provide a publicly accessible URL.

8. Is the UI important?

Yes. A clean, modern, and responsive ChatGPT-style interface is highly encouraged and will receive bonus points.

9. Is the Discord integration mandatory?

No. Discord integration is a bonus feature and is not required for the core assignment.

10. Can I implement additional features beyond the requirements?

Absolutely. Additional features, UI improvements, performance optimizations, or thoughtful

enhancements are encouraged and may positively influence the evaluation.
